

E-Based Pool Management! Exclusive Open-Architecture Design Wirelessly keeps you In Touch and In Control 24/7!

Operating a commercial pool facility provides many modern challenges including severely limited operating budgets, tremendous liability implications for even minor mishaps, and uncertified and/or sometimes disinterested pool service / operators with less training and experience that ever before. These challenges require a proactive approach, modern techniques, and state of the art technology.

CES's Exclusive Open-Architecture E-Based Pool Management provides a full turn-key program with 4 layers of remote control via Ethernet or wireless connections. Plus you can keep track of your pools 24/7 with BECSysNow, a custom App for your smart phone or tablet. CES E-Based management gives you:

Remote Monitoring, 24/7 Recordkeeping

Remotely monitor your pool and spa operation from any CES software equipped computer, tablet, or smart phone. Instantly check all major parameters, review historical chemical readings, and all treatment and filtration events (chemical feeder on / off, operator adjustments, filter cleanings, and others). Maintain permanent logs for maximum safety and liability avoidance.

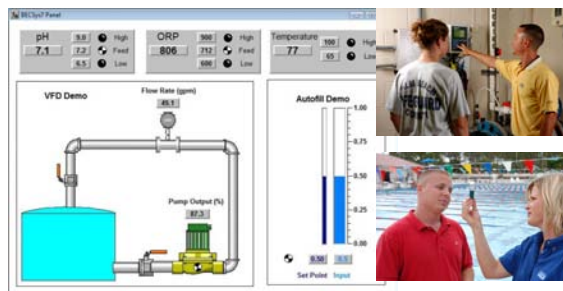

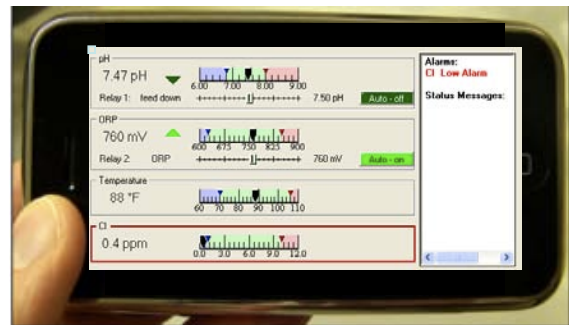

Remote Control – with no Monthly Fees

Reliably control your pool equipment from anywhere in the world, any time of the day or night. You can take direct control of: pH, ORP levels, Chlorine residual, circulation pump flow, water level, water temperature, saline treatment, Ozone or UV treatment, and more. Monitor and control multiple pools at multiple locations on the same screen or separately. Unlike other services, there are NO access fees.

Alert Notification – stay out of harms way

Instantaneous email and text alerting of any out of range conditions helps you avoid any potential operational and/or liability issues. Alarm trigger points are custom tailored to your pool size, bathing loads, and requirements. Up to 8 programmable layers of text messages and emails provide the best support for your in house operations, proactively maintaining smooth, hassle-free pool care.

Service in the pump room & in the Cloud

Remote control is extremely beneficial to any facility operations, but it cannot replace the award-winning on-site training, service, and support provided by CES. We will configure a custom E-Based management package along with on-site preventive maintenance, service and support. You can also maintain 24/7 connection to your energy management system while utilizing full E-Based services.
