

Get Alert Notification, Pool Trending Analysis, and Cyber Support with the CES Precision Communication Device (PCD) !

Let CES help you take control of your pool/spa/facility operation!

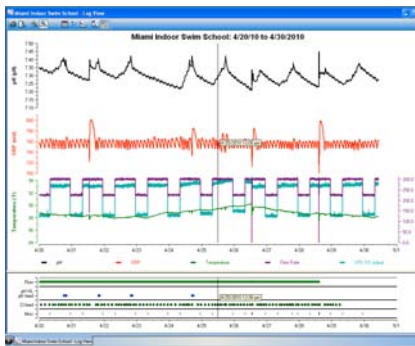

CES introduces the PCD (Precision Communication Device) to immediately and affordably connect all your pools, without all the hassles of network set up or firewall connection or permissions.

Communication without integration to your network: Sometimes IT departments have a difficult time granting fairly simple access to a secure and proven network infrastructure. The PCD allows you to have instant access to your BECS controls system from anywhere in the world

24/7 electronic log-keeping and Alert Notification: The PCD gives your BECS controller the ability to instantly communicate via email/text messages with up to 8 key recipients. You can structure personalized order, wait times, and you have access to 24/7 continuous logs for the ultimate in patron safety and liability avoidance.

Cyber Support: Need help with a controller configuration? We are here to assist! CES will provide help with changing alarms, configuring turndowns, programming alternate set points, reviewing logs & trends, etc. Our service department and field technicians are integrally involved in your everyday operations via the BECSysNow and alert notification programs, and our staff of trained professionals can continually monitor your facility, review your logs, and offer assistance with any issues in pumping, heating and treatment systems.

No Expensive Equipment to Purchase: CES PCD is available with no up front cost, and utilizes an affordable monthly program.*

*Monthly Cost Requires a 1 or 2 Year Agreement.
